GENERAL BENEFITS OF BIOLOGICAL SOLUTIONS FOR WASTE TREATMENT

- Saves you time and money.
- Faster waste digestion.
- Substantially reduces clean out frequency.
- No longer allows heavy crusting.
- Easy to use/no need for special equipment.
- Reduces wear and tear on machinery.
- Waste treatment system operates better and becomes biologically healthy
- Increases dissolved oxygen (DO).
- Eliminates most odors.
- Reduces ammonia levels.
- Reduces nitrate levels.
- Reduces phosphate levels.
- Reduces biochemical oxygen demand (BOD)
- Reduces volatile suspended solids
- Reduces total suspended solids (TSS)
- Environmentally safe
- Effective on municipal/institutional waste treatment
- Effective in septic systems
- Effective in animal waste lagoons and compost piles
- Accelerates decomposition of solids
- Positive effects on effluent discharge
- Microbial action is increased
