April 5, 2004

To Whom It May Concern:

I have been on an Organic Bio Flora Products regimen for six years, and I am very happy with the results. I have tried a number of solutions with the liquid fertilizer and finally settled on this combination 5 gallon Humega, 5 gallon fulvic acid, 5 gallon turf master, plus, a Lesco product 12-0-0 6% iron. I apply this formula to ten greens approx 50,000 square feet mixed with 150 gallons of water. I was pleasantly surprised especially when I found out that I had very little or no fungus on the greens. Another reason I like it, is I can leave it on the greens up to 48 hours without watering, since this a foliar in take fertilizer.

I also use the poultry Crumbles 8-3-4 for fairways and tees. I like it because it is a slow release type of fertilizer, and it doesn't require immediate water in. I am happy with the Regional Rep Brent Shaw. He goes out of his way to make sure we receive all of the products as soon as I need them. I also respect his knowledge of turf and what his products can do for any type of turf.

Sincerely,

Floyd White C.S.C.S.
